

***Trirhithrum viride* Munro**

[*Ceratitis*] *Trirhithrum viride* Munro, 1934: 479

Wing length=3.4 mm.

Female

All characters identical to, or fitting within the known range of variation of *T. senex*, except as follows: posterior apical crossband short, ending closer to vein R_{4+5} than to vein M. Scutum without a microtrichose sheen. Female terminalia with aculeus pointed (not dissected but apex exposed in holotype).

Male

Unknown; likely to be similar to female, but with a bulla.

(description after White et al., 2003)
